Utility Accountability

The Clean Energy Jobs Act - SB1718 (Castro) / HB804 (Williams) - sets a bold vision for Illinois’s 100% renewable energy future and charts an equitable course that lifts up workers and families. CEJA dramatically expands career development and wealth building programs and prepares us for the transitions that lie ahead. Its dedication to climate and energy justice cuts across all sectors of the energy economy to ensure Black and Brown communities and communities of color benefit in the clean energy future. These fact sheets each represent one core component of CEJA - we encourage you to explore the entire series.

Utility Accountability

The laws that govern how Illinois’ utilities operate and make money are based on an outdated model more than a century old. The more money utilities spend, the more profits they make, and all the costs are passed directly to consumers. The results: our utilities spend more of our money than they should, but don’t invest enough in clean energy. On top of that, under the current “formula rate” system, our utility regulators don’t have all the tools they need to be effective watchdogs.

CEJA sets bold goals for utilities to make the grid more affordable, clean, and equitable - and ensures that utility profitability is contingent upon achieving those goals. It creates an open, transparent process for making big decisions about our electric grid, and empowers regulators to ensure our money is well-spent.

Sound Planning for a Modern Electric Grid

Replaces Illinois’ outdated “formula rate” process with a transparent, forward-looking planning process (i.e. an Integrated Grid Plan) that coordinates investments in the electric grid to enable an affordable clean energy future.
HOW IS IT PAID FOR?

The Illinois Commerce Commission’s increased oversight and public engagement duties will require an expanded agency budget to pay for staff that the ICC doesn’t currently have. However, a small investment in staff time to evaluate and vet billions of dollars in spending will create significant savings for customers. Utilities would pay for community groups’ participation.

WHY IS IT URGENT?

Under Illinois’ current regulations, utilities have inflated their profits and overspent on traditional infrastructure without advancing clean energy, and they propose to spend billions of dollars more over the next decade. Some of these regulations are set to expire soon, presenting an opportunity for Illinois to create a new regulatory system that truly puts customers first. CEJA does just that. Rather than continue outdated incentives, CEJA aligns profits with performance, expands oversight, and requires utility investments to make our grid more affordable, clean, and equitable.
